

E7X HIGH-SECURITY CYLINDERS

Introducing the E7X range of dual-finish euro cylinders, built with top-level security in mind and designed to make your job easier.

This cylinder is tough, durable, and ready to resist all common forms of attack so you can trust it to keep your customer's home and families secure.

ANTI-SNAP PROTECTION – ON BOTH SIDES

E7X Euro Doubles come with sacrificial cuts on both the internal and external sides, designed to break in the event of a forced attack. Once the external side snaps, the locking mechanism kicks in and locks the cam, while the internal side stays fully functional.

PICK, BUMP & DRILL RESISTANCE

The specially designed E7X keyway, along with anti-bump and anti-drill pins, provides exceptional protection against lock-picking and tampering. You're getting a cylinder that's more than a match for would-be intruders.

DUAL FINISH – LESS STOCK, MORE FLEXIBILITY

With a nickel-plated body and polished brass plug, E7X offers a sleek, dual-finish design that works perfectly in both nickel and brass fittings. This means you'll need to carry less stock while being ready for any job, whether it's in nickel or brass installations.

FIRE RATED

E7X is fire-rated for up to 30 minutes, providing peace of mind for fire-rated door applications. It's the ideal solution for homes and businesses that need fire protection alongside robust security.

WHY CHOOSE E7X?

- Advanced dimple mechanism for superior security.
- BSI Kitemarked, surpassing BSI 3-Star Grade 6.
- Meets and exceeds EN1303:2015 standards.
